LameFE comes with a powerful and easy to use GUI for ripping CDs. Besides the cd-ripper you can also encode files directly to various formats like MP3, Ogg, Wave-Audio and Monkey Audio. Besides that LameFE supports CD-Text, and can play audio CD's on your computer. The GUI of LameFE comes with a simple and well designed look, but its powerful feature set allows for an extremely easy and efficient way of ripping a large variety of CDs. The features and options LameFE can offer, are just the beginning. There is plenty of cool new features coming, that will surely enhance LameFE even more in the future. LameFE supports a lot of different input formats, including CUEs and SND-files. LameFE can also support CD-Text, if your burner supports that. Each input file of the CD-ripper is stored in its own directory, allowing you to easily add and remove files, without affecting the original directory. LameFE is a highly customizable software, allowing you to create different and unique layouts for the files it creates. You can even make a layout in which you specify the name of the whole CD-directory, and the different files inside of it. The tag editor of LameFE allows you to make changes in tag information, and to make your new file unique. LameFE also supports a wide variety of encoders, and allows you to set the MP3 encoder to your preferred settings and quality level. I have suggested it in a German forum and there is a lot of interest. I think it would work best in a standard German radio station for the european audience. I think it could be well suited for the radio podcast side. If there are any other candidates please let me know. Since you are German, maybe the best approach would be to use an equivalent to [ietg.org](#).
